Install and Update Software with apt

For Linux Mint, Ubuntu and Debian

Command	What it does
`$ sudo`	run a command as administrator (asks for your password)
`$ sudo apt update`	refresh the list of available software
`$ sudo apt upgrade`	install available updates
`$ sudo apt install name`	install a program
`$ sudo apt remove name`	uninstall a program
`$ apt search word`	search for software
`$ apt show name`	read about a program
`$ sudo apt autoremove`	remove packages no longer needed

Tip: Prefer clicking? The Software Manager app does the same job. Fedora uses dnf instead of apt.
