

Number Bank Pyramids

Free sampler • 6 puzzles • answers on the last page

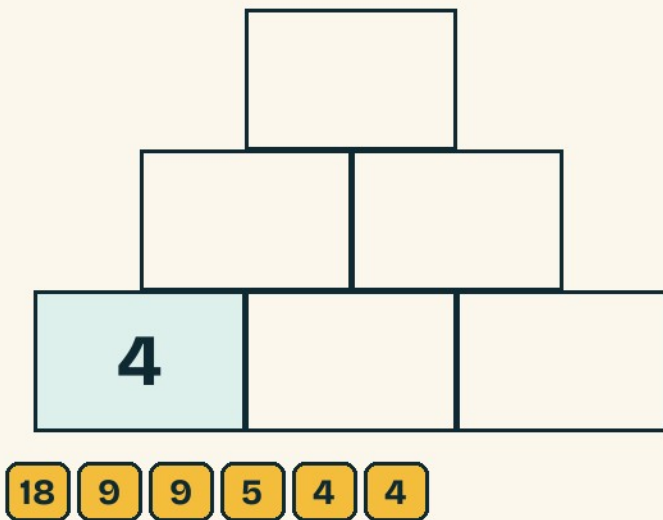

Place every number from the bank exactly once so that each brick is the sum of the two bricks under it. The bank already includes the numbers printed in the pyramid. Cross out one chip for each brick you fill, repeats included.

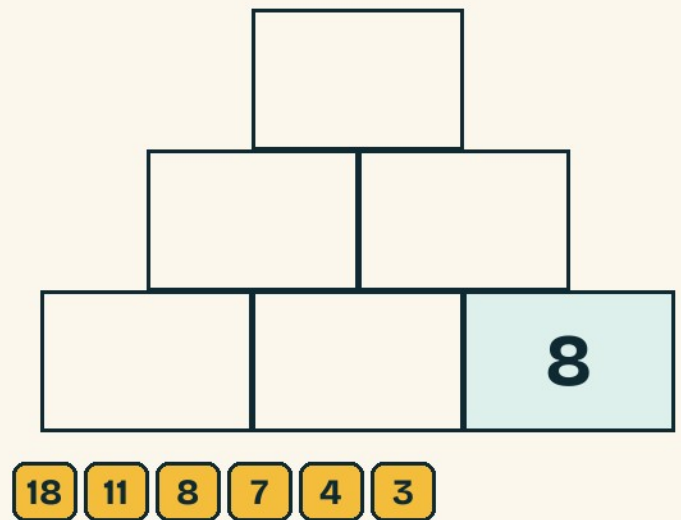

Worked example. Every brick is a part of the top, so the top is the largest number in the bank: 21.

Hint: the top brick is always the biggest number in the bank.
