Subtraction Pyramids

Free sampler · 6 puzzles · answers on the last page

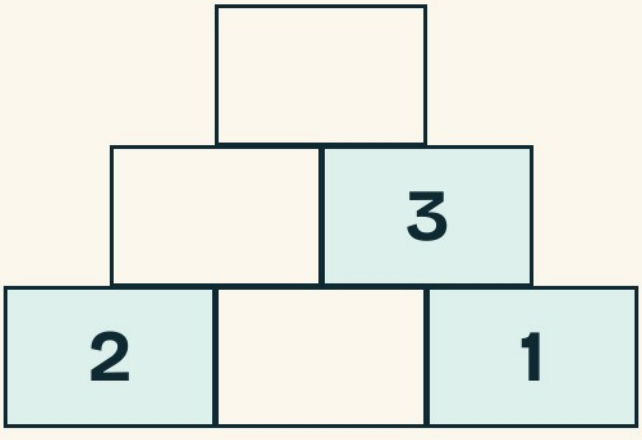

Each brick is the difference of the two bricks under it: the bigger number minus the smaller one. Every bottom brick is a whole number from 0 to 9. Fill every empty brick.

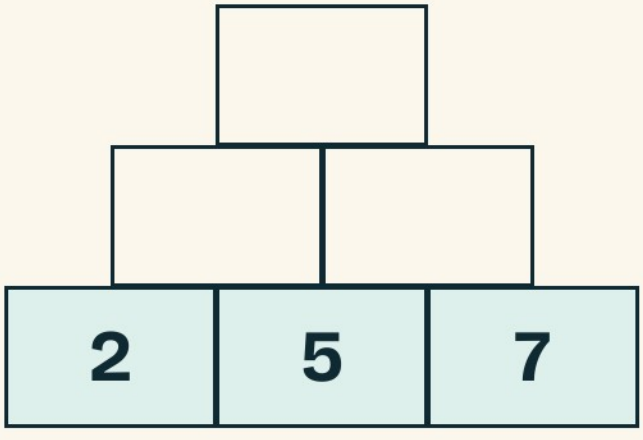

Worked example. Look at each pair under a brick and take the smaller from the bigger. 9 and 4: 9 − 4 = 5. 4 and 7: 7 − 4 = 3. 7 and 2: 7 − 2 = 5. Now 5 and 3: 5 − 3 = 2. And 3 and 5: 5 − 3 = 2.

Hint: a brick that is the difference could come from a bigger left brick or a bigger right brick. Check both.
